1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 16, 18-25, 27-28, 30-34 and 36-39 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kladders et al., as applied in the last office action. Kladders discloses most of the elements of the claims, but may be missing elements such as “heat set” and “wide mouth”. On the other hand such containers appear to be conventional. Moreover, the closure and container combination of Kladders is not disclosed in the reference as having any elements that are incompatible with the “heat set” or “wide mouth” limitations, or with any other known elements that may be deemed to be missing from the reference. For example Kladders does not teach that the prior art closure/container combination disclosed is not “heat set” or “wide mouth”. Accordingly it would have been obvious in view of Kladders to provide the container/closure combination therein with the missing elements of the claims, for the purpose of improving the ability of the combination to be used with specific content.
3. Applicant's arguments filed 7/28/08 have been fully considered but they are not persuasive. Applicant points to column 1 lines 12-23 of Kladders as support for the argument that Kladders is directed to an invention that has nothing to do with the invention disclosed and claimed in the subject application. On the other hand,

the noted section of Kladders clearly describes background teachings that may be relevant to the Kladders disclosure, but that are not necessarily limiting with respect to the Kladders invention. Accordingly, the applicants sole use of this section of Kladders to characterize the relevant Kladders teaching is not convincing to this examiner. On the other hand it does appear that the claims continue to recite limitations that are well known in the art. See the descriptions of the prior art in applicants specification and the prior art cited in this case, for example, and compare these with claims 16 and 33, for example. Applicant appears to disclose that every element of these claims is known in the art. Additionally, Kladders also clearly teaches the sealing means, headspace displacing member and clearance, in a general container/closure combination. Accordingly an argument that the “heat set” or wide “mouth limitation” should distinguish over Kladders is simply not convincing.

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened

statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
